# CARDEXCHANGE® BRIDGE

CardExchange® Bridge is used with CardExchange® Controller as an additional service to enhance the capabilities for data synchronization. With the Bridge we offer three different products.

CardExchange® Bridge Local, CardExchange® Bridge Connect, and CardExchange® Bridge API.

You can simplify and automate your enrollment and card issuance processes by adding the Bridge automation features for data management. Depending on how you configure your business rules and schedules, the Bridge eliminates the need to manually import data or any unnecessary work to update your data in multiple systems.

Data from your source database(s) can be automatically synchronized with the Cloud Suite applications.

Card production data such as card number and status can be automatically sent to connected systems for access control, print & copy, time & attendance, cashless catering, and more.

## **FLEXIBLE METHODS TO CONNECT**

Bridge API refers to a REST API that allows your existing systems to integrate and communicate directly with the CardExchange® Cloud applications. With the applications databases connected, you can utilize all functionalities that come with the CardExchange® Cloud Suite. The service includes access to the API, its documentation, and the professional API integration support.

## **DATABASE CONNECTIVITY**

Our CardExchange® Cloud Suite can communicate with any database system you have available in your organization. Easy scheduling importing information into our suite back office, as well as reporting information back to connected databases including defined business logic.
