CARDEXCHANGE® IDENT

A SOLUTION FOR EVERY ORGANIZATION

CardExchange® Ident offers an efficient way to manage and collect data. This new age of ID management cannot be without mobile integration to create effective enrollment processes. CardExchange® Ident is a self-service portal that works in conjunction with our CardExchange® Controller and provides your users with quick and easy access to their account using a phone, a tablet, or a desktop computer.

By allowing users to manage their ID through a self-service portal you can eliminate the need for expensive resources to manage your enrolment and issuance process. Allowing the users to verify their personal details, upload their photo, and manage their ID status improves security and prevents unwanted activity.

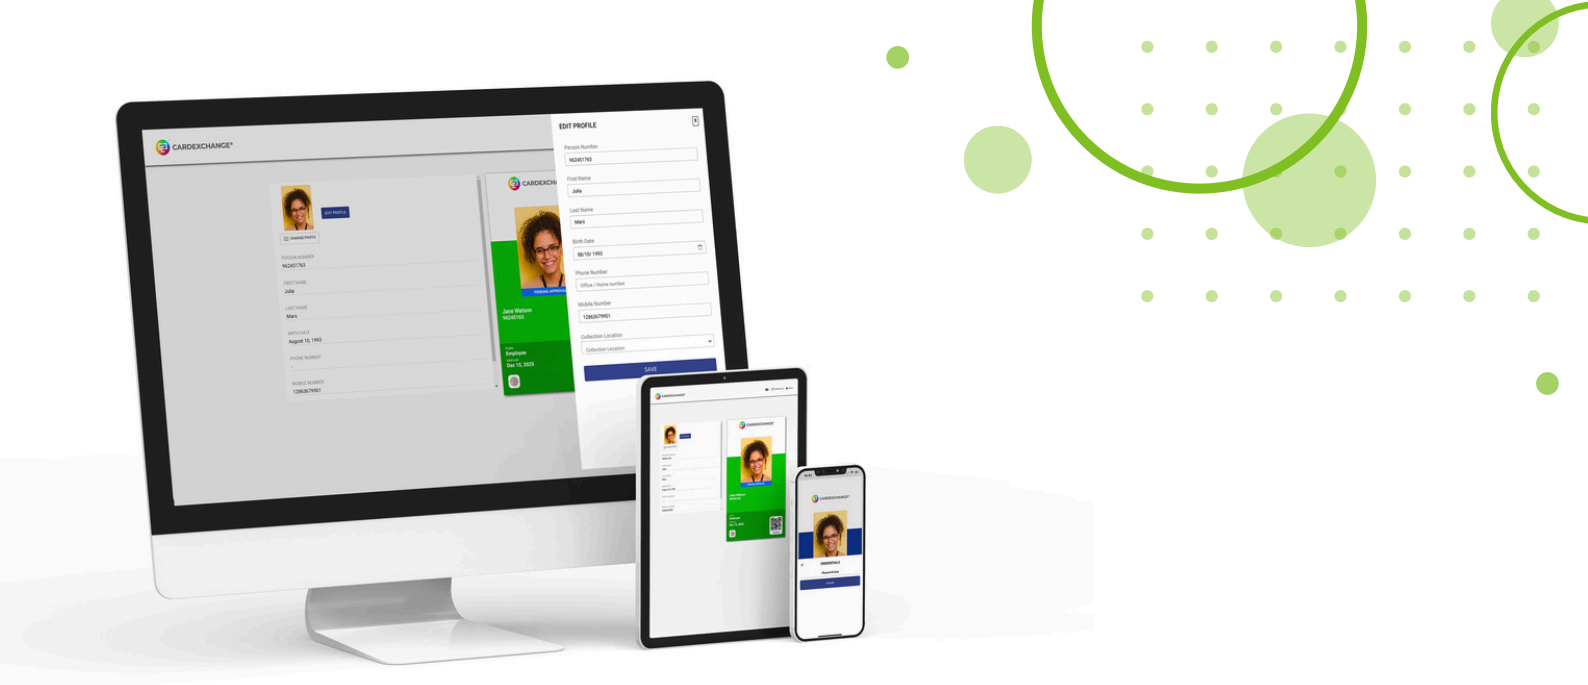

DIGITAL & VIRTUAL IDS

By using virtual, digital ID's or even a hybrid solution, enrolment processes have never been faster. Eliminating the need for card production, mail or pick up services can not only save you time, but it saves money!

The CardExchange® Ident allows you to personalize the look and feel of the interface by adding your colors, logos, and more. Using a virtual ID the user can show their Active ID status easily. Using a virtual ID allows you to quickly deactivate any person instantly and block entrance into your facility.

The CardExchange® Ident app offers the perfect solution for every organization. Whether you want to get away from the physical ID altogether or enhance your card issuance program by adding digital or virtual IDs, CardExchange® Ident app enables you to have the best of both worlds.

Ident Feature Highlights

➤➤➤ **Photo and Document Comparison**

When dealing with a large cardholder base it can become time consuming to manage. With our photo approval features someone can upload a photo and have them upload an approved government ID document and our the CardExchange® Controller will automatically compare their photo against the official government ID document. Ensuring you always know you have the right person.

➤➤➤ **Real-Time Data Updates**

The ID status functionality adds an additional level of security as cards can be produced and disturbed before they are activated. Until the card is activated it will not work. Any status or data that is communicated through the CardExchange® Ident is automatically updated in the CardExchange® Controller, your credential management software.

➤➤➤ **Customization**

Through the CardExchange® Admin Center, you can define how you want each of your different digital IDs to look. You can automatically change the digital ID layout based on a profile. Within the design process, you can change the color of the background and some of the text, add your logo, add 1D or 2D barcodes, and much more.
